

Password Reset Guide

*****Please note, that the password change is system wide, when making a change to your password the new details will need to be entered into any devices using this account.***

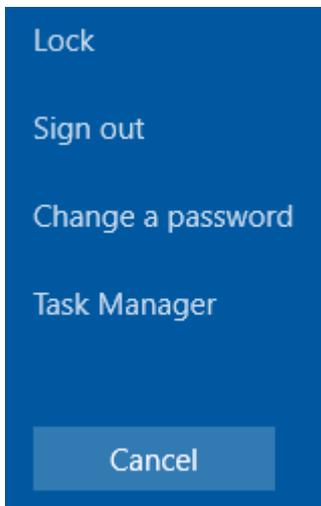

Log onto the server using your current Account Credentials

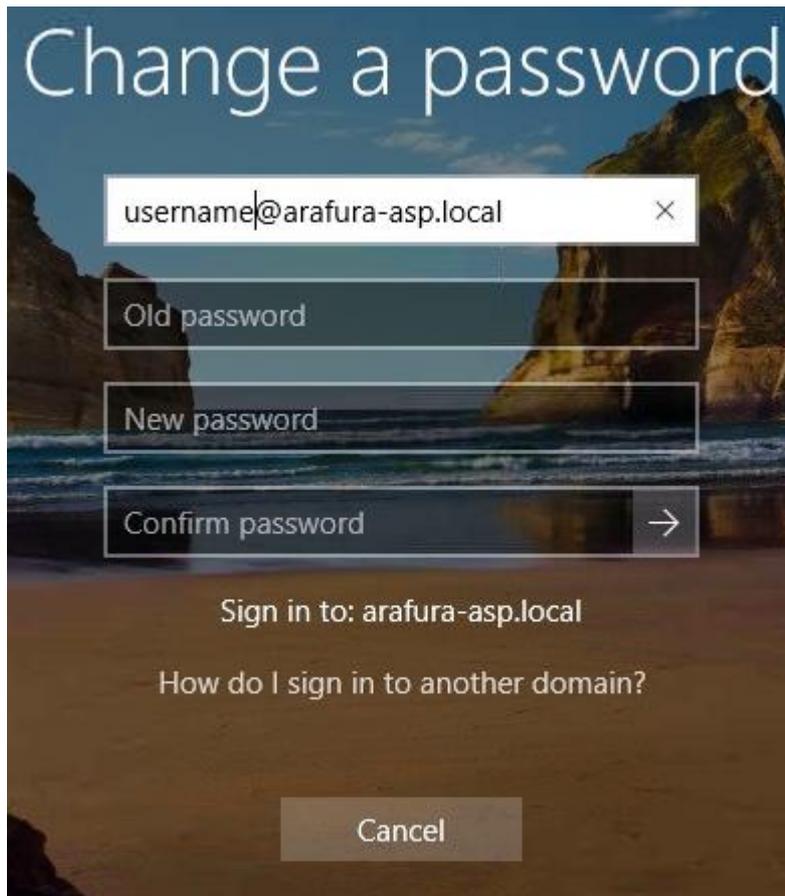

Once logged into the server you can press **CTRL + ALT + END** in your Remote Desktop (RDP) session, this will open the Windows Security dialog.

This shortcut is the same as **CTRL + ALT + DEL**, but works in the RDP window only.

Select **Change a password**

Enter your **Current Password**

Enter your **New Password** twice, when completed hit **Enter**

(Ensure your password is complex and not a dictionary word) Great examples are sentences such as MyDogsName is Woof!

You will be prompted to change/update the password on all your devices that are using this account.

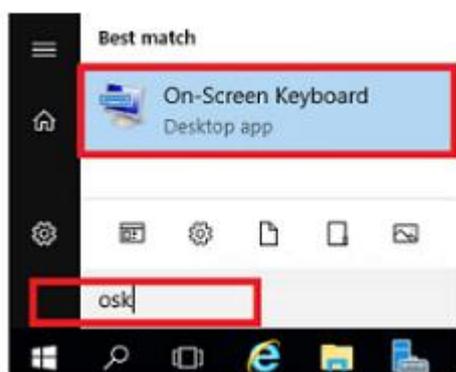

Changing Password using the On-Screen Keyboard

If you are connected to a Remote Desktop through an RDP session you will not be able to use the **CTRL + ALT + END** to change your password. In this case you can use the built-in **Windows On-Screen Keyboard** to change the password.

Run the **On-Screen Keyboard**, in the **Start** menu

Type **osk**

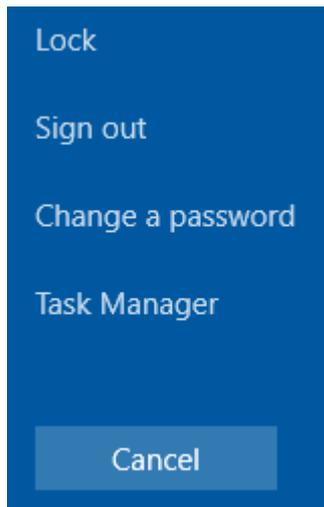

You will see the **On-Screen Keyboard**

Press **CTRL + ALT** on your physical keyboard, then press the **DEL** button on the **On-Screen Keyboard**

The **CTRL+ALT+DEL** key combination will be sent to the RDP session and this will open the Windows Security dialog.

Select **Change a password**

Enter your **Current Password**

Enter your **New Password** twice, when completed hit **Enter**

(Ensure your password is complex and not a dictionary word) Great examples are sentences such as MyDogsName is Woof!

You will be prompted to change/update the password on all your devices that are using this account.
